Career Objective

Dedicated and learning driven professional with a background in retail operations and a passion for visual design, problem solving and programming. Seeking to leverage my expertise in customer service, teamwork, and managing moving goal posts, along with my self-taught proficiency in front-end languages such as JavaScript to find a good fit at an inspiring organization. Pursuing a dynamic junior role where I can meaningfully contribute to innovative software solutions while continuing to be shaped by best practices.

Projects

Moaratorium.xyz Developer

Aug 2024 – Current

- Designed a responsive greenfield web portfolio with React & Vite for Node.js.
- VM Managed using AWS.
- Planned and tracked stories using Jira and Git. Repository was organized with Gitflow branching strategy and velocity was maintained with use of planning poker.

Randall Discord Music Bot Developer

Jan 2024 – Current

- Designed a responsive multipage front end using Socket.IO, jQuery & Bootstrap to allow admins and users to easily navigate and interact with bot features across multiple Discord servers.
- Implemented bugfixes caused by changes and gradual deprecations to Discord's API.
- Planned and tracked stories using Jira and Git. Repository was organized with Gitflow branching strategy and velocity was maintained with use of planning poker.
