Career Objective

Dedicated and learning driven professional with a background in retail operations and a passion for visual design, problem solving and programming. Seeking to leverage my expertise in customer service, teamwork, and managing moving goal posts, along with my self-taught proficiency in front-end languages such as JavaScript to find a good fit at an inspiring organization. Pursuing a dynamic junior role where I can meaningfully contribute to innovative software solutions while continuing to be shaped by best practices.

Projects

Moaratorium.xyz Developer

Aug 2024 – Current

- Designed a responsive greenfield web portfolio with React & Vite for Node.js.
- Deployed web application using AWS EC2 for compute.
- Configured Route 53 for DNS with Nginx for https and load balancing. Added autorenewing certificates via Let's Encrypt.
- Planned and tracked stories using Jira and Git with gitflow branching strategy.
- Velocity was maintained by using planning poker.

Randy Discord Music Bot (v2) Developer

Nov 2024 – Current

- Designed a component-based frontend using Vue.js, Vite & a REST API to allow admins and users to easily navigate and interact with bot features across multiple Discord servers.
- Deployed web application using AWS EC2 for compute.
- Planned and tracked stories using Jira and Git with trunk-based branching strategy.
- Velocity was maintained by using planning poker.

Randall Discord Music Bot (v1) Developer

Feb 2021 – Nov 2024

- Designed a responsive multipage front end using Socket.IO, jQuery & Bootstrap to allow admins and users to easily navigate and interact with bot features across Discord servers.
- Implemented bugfixes caused by changes and gradual deprecations to Discord's API.
- Planned and tracked stories using Jira and Git with gitflow branching strategy.
- Velocity was maintained by using planning poker.
